

# **Promoting evidence-based conservation actions: Best-practice for the implementation of vulture feeding stations**

**International workshop on supplementary feeding for Griffon Vultures  
18-20 October 2022, Alghero.**

**Julien Terraube & Jacopo Cerri  
Workshop-20 October 2022**

**PRIOR  
ASSESSMENT**

Before implementing feeding stations:

- ✓ What is the availability of carcasses?
- ✓ What is the most appropriate type of feeding station type depending on local conservation objectives?

**MONITORING**

**What are the best methods to monitor the impact of feeding stations?**

- ✓ Camera traps/ webcams;
  - ✓ GPS transmitters;
  - ✓ Direct observations
- Vultures**
- Carcasses**
- ✓ Lead ammunition
  - ✓ Type of carcass provided
  - ✓ -Tests for drug/bacteriological contamination;

**IMPACT  
EVALUATION**

**Which parameters are important to collect in order to assess FS impacts?**

- ✓ Attendance of GV vs. other avian scavengers
- ✓ Relate FS use to change in demographic parameters;
  - accurate monitoring of breeding success in closest colonies
  - capture/recapture of marked individuals;
